SUMMARY

Experienced and detail-oriented Software Quality Assurance Engineer with strong expertise in manual and automated software testing, specializing in large-scale banking and e-commerce systems. Proven ability to design and execute comprehensive testing strategies across web, mobile, and API platforms to ensure product reliability, functionality, performance, and compliance with business requirements.

Skilled in the end-to-end software testing lifecycle, including test planning, test execution, defect management, test reporting, and quality assurance governance within Agile development environments. Experienced in collaborating with cross-functional teams, including developers, business analysts, product owners, and stakeholders, to deliver high-quality, user-centric software solutions.

Proficient in industry-standard testing tools and technologies such as Jira, Postman, Selenium, Playwright, Appium, WebdriverIO, and Katalon Studio. Possesses a solid understanding of Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC), Agile methodologies, and Behavior-Driven Development (BDD).

Recognized for strong analytical thinking, problem-solving capabilities, attention to detail, and a commitment to continuous improvement, process optimization, and delivering software products that meet both business objectives and customer expectations.

EXPERIENCE

- Software Quality Assurance Tester

PT. Bank Rakyat Indonesia (Persero) Tbk ↗

08/2024 - Present

 - Contributed to the development of internal applications for Bank BRI's Head Office and Branch Offices, focusing on the Merchant Management System (MMS) to support operational efficiency.
 - Executed deployment processes for newly developed features and bug fixes, ensuring successful and stable rollout to staging and production environments.
 - Performed comprehensive manual testing, including System Integration Testing (SIT), User Acceptance Testing (UAT), Functional Testing, Regression Testing, and End-to-End (E2E) Testing for features with cross-module or business-critical impact.
 - Developed and maintained detailed test documentation, such as test scenarios, test cases, and technical notes to support quality assurance and continuous improvement.
 - Participated in regular coordination and alignment meetings with developers, QA teams, and project stakeholders to plan and evaluate sprint activities.
 - Utilized Agile methodologies throughout the development and QA lifecycle, ensuring iterative progress, early feedback, and collaborative team engagement.
- Software Quality Assurance

ByteDance Technology Co., Ltd. ↗

01/2024 - 06/2024

 - Conducted data integration testing between Tokopedia applications and TikTok Shop to ensure seamless synchronization and data consistency across platforms.
 - Performed functional and regression testing on delivery-related services such as BO/PLUS, free shipping vouchers, and visual delivery badges to verify correct implementation and user experience.
 - Involved in the migration of several key features from the Tokopedia platform to TikTok Shop, ensuring feature parity, functionality, and usability post-migration.
 - Utilized the Lark platform to create and manage test cases, maintain user story repositories, and track bugs or issues identified during the testing process.
 - Developed a strong understanding of the TikTok Shop ecosystem, focusing on buyer experience workflows, UI/UX behavior, and end-to-end user journey validation.

PT. GoTo Gojek Tokopedia tbk ↗

- Conduct comprehensive manual testing for web-based applications (desktop), Mobile Lite, Android, and iOS platforms to ensure optimal functionality and user experience.
- Review and analyze Product Requirement Documents (PRD) and Business Requirement Documents (BRD) to develop and execute effective testing strategies.
- Design and maintain detailed test documentation, including test cases, test scenarios, test plans, and execution reports, tailored to the defined testing scope.
- Identify, document, and report software defects, and collaborate proactively with Product Managers, Software Engineers, and Frontend/Backend Developers to troubleshoot and resolve issues.
- Promote cross-functional collaboration and foster effective communication across QA, Product, and Development teams to enhance product quality and delivery.
- Perform key testing activities including Smoke Testing, Regression Testing, and User Acceptance Testing (UAT) to validate product readiness and release quality.
- Implement Agile methodologies and follow best practices within the Software Development Life Cycle (SDLC) to ensure structured and iterative testing processes.
- Leverage a suite of QA and collaboration tools such as Jira, Confluence, Slack, Figma, Postman, and productivity platforms like Google Workspace and Microsoft Office to streamline workflows and ensure testing efficiency.

EDUCATION

Informatics Engineering ↗

09/2017 - 02/2022

Indraprasta PGRI University - Bachelor of Technology - BTech, Informatics Engineering

Final Project: "Pengembangan Aplikasi Pengelolaan Data pada Rainbow Rent Car menggunakan NetBeans".

- A comprehensive program in computer science, software engineering, and IT. Covers programming, databases, networks, OS, web/mobile development, and cybersecurity. Combines theory and hands-on practice through labs and projects. Emphasizes problem-solving, algorithmic thinking, and SDLC. Prepares graduates for careers in software development, QA, system analysis, and IT consulting.
- As part of the undergraduate thesis, developed a desktop-based data management application for Rainbow Rent Car, aimed at improving operational efficiency through digitalization of manual processes.
- The application was built using Java and the NetBeans IDE, with a focus on CRUD functionality, user-friendly interface, and integration with a relational database (MySQL).
- Key responsibilities included system design, requirements analysis, user interface development, and back-end implementation. The system enables streamlined management of customer data, vehicle inventory, and rental transactions.
- The project applied principles of software engineering, database design, and object-oriented programming, aligning with real-world business needs.

CERTIFICATES

QA Automation Katalon ↗

07/2025 - 08/2025

AfterOffice Academy

- Introduction to QA and Testing Concepts: Gained a clear understanding of the core principles of Quality Assurance (QA), distinctions between QA and Quality Control (QC), and various types of testing including functional, non-functional, regression, and smoke testing.
- Introduction to Katalon Studio: Learned the interface, installation process, and basic configuration of Katalon Studio – a beginner-friendly automation tool known for its ease of use and comprehensive features.
- Web Test Automation Fundamentals: Practiced the Record and Playback method to automate web testing without the need for manual scripting, serving as an entry point into test automation.
- Test Object Management: Understood the concept and structure of the Object Repository in Katalon Studio, enabling efficient management of web elements during automated testing.
- Developing Simple Test Cases: Built and executed simple yet effective test cases to validate functionality and improve testing accuracy.

- Test Reporting and Analysis: Learned how to interpret and analyze test reports generated by Katalon Studio to identify and troubleshoot failed test cases.
- Final Practical Project: Completed a hands-on project that applied all learned concepts by automating functional tests on a sample website, demonstrating proficiency in test design and execution.

Quality Assurance Automation ↗

SanberCode

07/2023 - 08/2023

- QA Fundamentals: Demonstrated a solid understanding of Quality Assurance principles, automation life cycles, test case development, Gherkin scenario writing, and software development methodologies such as Waterfall.
- API Testing: Proficient in API testing using Postman, with hands-on experience in automated testing through JavaScript frameworks such as Mocha and Chai, supported by an in-depth understanding of REST architecture.
- Web Testing: Skilled in web test automation utilizing leading industry tools and frameworks including Selenium, Playwright, and WebdriverIO. Possess strong knowledge of Web Element Locators and the implementation of Behavior-Driven Development (BDD) using Cucumber.
- Mobile Automation: Experienced in mobile application automation testing for both Android and iOS platforms using Appium and WebdriverIO.
- Non-Functional Testing: Acquired a comprehensive understanding of performance testing fundamentals, essential for ensuring application speed, stability, and reliability.

SKILLS

Testing	Expert	API Automation	Basic
Microsoft Office	Intermediate	Cypress	Basic
Google Tools	Intermediate	Webdriver IO	Basic
Confluence	Intermediate	Cucumber	Basic
Jira	Intermediate	Mocha & Chai	Basic
Postman	Intermediate	NetBeans	Basic
MySQL	Intermediate	Javascript	Basic
